

#### FEATURES

Improves laminated glass panels acoustic and thermal performance capabilities.

Combine Coloured Interlayers with digital ceramic printing for uniquely custom projects.

Additional Transparent, Frosted & Opaque colour options and styles available.

Glass can be tempered / heat soaked for additional safety and security options.

#### THICKNESS

8.76mm - 17.52mm

\*Custom thickness' and makeups available

#### MAXIMUM SIZE

1800x3500mm, 71"x138"

#### GLASS TYPES

Clear, Low Iron, Acid Etch

\*Custom glass types and tints available on request

#### Glass Make-up

#### Custom Options

Transparent, Translucent and Opaque options are available allowing you to achieve the perfect vibrancy and intensity when glazing. Further more colours can be layered together creating almost endless options. For a truly custom look and style combine Coloured Interlayers with a design utilizing digital printing or Laser Etching.

# COLOURED INTERLAYERS

Create a truly unique project by incorporate some colour, using Integral Seal's eye catching Coloured Interlayer range.

Designed form maximum clarity along with stability over a long period of time Coloured Interlayers offer a simple yet stunning option to any internal glass project. Permanently laminated between two panels of glass, the wide array of colours range from subtle blues and greens to vibrant bright reds and purples.

Because the film is laminated between panels the adhesion lasts far longer than regular stick on films, removing the chance of those unseemly peeling edges. Coloured Interlayers are manufactured from sustainable materials and maintain their impact resistance. They reach the all typical safety standards of Integral Seal's regular EVA laminated glass panels.
